NORTH-HOLLAND

SUBJECT INDEX OF VOLUME 65*

Boundary element methods

The dual reciprocity boundary element formulation for diffusion problems, L.C. Wrobel and C.A. Brebbia (2) 147–164

Control theory

Analysis of loop methods for simulating gas networks, A.J. Osiadacz and K. Rudowski (3) 201–213

Coupled problems

Petrov–Galerkin formulations for electrochemical processes, D.K. Ganjoo and T.E. Tezduyar (1) 61– 83

Design of programs

Analysis of loop methods for simulating gas networks, A.J. Osiadacz and K. Rudowski (3) 201–213

Dynamics

Stability of multi-time step partitioned transient analysis for first-order systems of equations, P. Smolinski, T. Belytschko and W.K. Liu (1) 115–125

Elasticity

New improved hourglass control for bilinear and trilinear elements in anisotropic linear elasticity, B.C. Koh and N. Kikuchi (1) 1– 46
Implantation of a nonlinear capability on a linear software system, J. Argyris, H. Balmer and J.St. Doltsinis (3) 267–291

Finite element and matrix methods

New improved hourglass control for bilinear and trilinear elements in anisotropic linear elasticity, B.C. Koh and N. Kikuchi (1) 1– 46

* The issue number is given in front of the page numbers.

Implementation of an element-by-element solution algorithm for the finite element method on a coarse-grained parallel computer, R.B. King and V. Sonnad (1) 47 – 59
Petrov–Galerkin formulations for electrochemical processes, D.K. Ganjoo and T.E. Tezduyar (1) 61 – 83
A new finite element formulation for computational fluid dynamics: VII. The Stokes problem with various well-posed boundary conditions: Symmetric formulations that converge for all velocity/pressure spaces, T.J.R. Hughes and L.P. Franca (1) 85 – 96
Stability of multi-time step partitioned transient analysis for first-order systems of equations, P. Smolinski, T. Belytschko and W.K. Liu (1) 115 – 125
Structural optimization based on second-order approximations of functions and dual theory, X. Renwei and L. Peng (2) 101 – 114
Shells of revolution with local plasticity, J.S. Lin and P.L. Gould (2) 127 – 145
Implantation of a nonlinear capability on a linear software system, J. Argyris, H. Balmer and J.St. Doltsinis (3) 267 – 291

Fluid mechanics

Petrov–Galerkin formulations for electrochemical processes, D.K. Ganjoo and T.E. Tezduyar (1) 61 – 83
A new finite element formulation for computational fluid dynamics: VII. The Stokes problem with various well-posed boundary conditions: Symmetric formulations that converge for all velocity/pressure spaces, T.J.R. Hughes and L.P. Franca (1) 85 – 96
Hilbert's method for numerical solution of flow from a uniform channel over irregular bottom topographies, Y.Z. Boutros, M.B. Abd-el-Malek and S.Z. Masoud (3) 215 – 228

Fracture mechanics

On the location of straight discontinuity intervals of arbitrary sectionally analytic functions by using complex path-independent integrals, E.G. Anastasselou and N.I. Ioakimidis (2) 165 – 176
On the numerical solution of the finite-part singular integral equations of the first and the second kind used in fracture mechanics, E.G. Ladopoulos (3) 253 – 266

General Rayleigh–Ritz and Galerkin techniques

On Galerkin's method interpreted as a generalized integral transformation, H.H.E. Leipholz (2) 177 – 189

Heat and diffusion

The dual reciprocity boundary element formulation for diffusion problems, L.C. Wrobel and C.A. Brebbia (2) 147 – 164

Simulation of two-phase flow in porous rocks on a laboratory scale: Diffusion operator splitting and consistency, Ø. Pettersen (3) 229 – 252

Incompressible and near incompressible media

A new finite element formulation for computational fluid dynamics: VII. The Stokes problem with various well-posed boundary conditions: Symmetric formulations that converge for all velocity/pressure spaces, T.J.R. Hughes and L.P. Franca (1) 85 – 96
Hilbert's method for numerical solution of flow from a uniform channel over irregular bottom topographies, Y.Z. Boutros, M.B. Abd-el-Malek and S.Z. Masoud (3) 215 – 228

Miscellaneous topics

On the location of straight discontinuity intervals of arbitrary sectionally analytic functions by using complex path-independent integrals, E.G. Anastasselou and N.I. Ioakimidis (2) 165 – 176

Nonlinear mechanics

Shells of revolution with local plasticity, J.S. Lin and P.L. Gould (2) 127 – 145
Implantation of a nonlinear capability on a linear software system, J. Argyris, H. Balmer and J.St. Doltsinis (3) 267 – 291

Numerical solution procedures

New improved hourglass control for bilinear and trilinear elements in anisotropic linear elasticity, B.C. Koh and N. Kikuchi (1) 1 – 46
Implementation of an element-by-element solution algorithm for the finite element method on a coarse-grained parallel computer, R.B. King and V. Sonnad (1) 47 – 59
Stability of multi-time step partitioned transient analysis for first-order systems of equations, P. Smolinski, T. Belytschko and W.K. Liu (1) 115 – 125
Simulation of two-phase flow in porous rocks on a laboratory scale: Diffusion operator splitting and consistency, Ø. Pettersen (3) 229 – 252
On the numerical solution of the finite-part singular integral equations of the first and the second kind used in fracture mechanics, E.G. Ladopoulos (3) 253 – 266

Optimization and design of structure

Structural optimization based on second-order approximations of functions and dual theory, X. Renwei and L. Peng (2) 101 – 114

Plasticity

Shells of revolution with local plasticity, J.S. Lin and P.L. Gould (2) 127 – 145

Shells and plates

Shells of revolution with local plasticity, J.S. Lin and P.L. Gould (2) 127 – 145

Solutions of integral equations (singularity method)

On the numerical solution of the finite-part singular integral equations of the first and the second kind used in fracture mechanics, E.G. Ladopoulos (3) 253 – 266

Structural mechanics

Implantation of a nonlinear capability on a linear software system, J. Argyris, H. Balmer and J.St. Doltsinis (3) 267 – 291

Subsonic flow

Hilbert's method for numerical solution of flow from a uniform channel over irregular bottom topographies, Y.Z. Boutros, M.B. Abd-el-Malek and S.Z. Masoud (3) 215 – 228

Transport phenomena

Petrov – Galerkin formulations for electrochemical processes, D.K. Ganjoo and T.E. Tezduyar (1) 61 – 83

Simulation of two-phase flow in porous rocks on a laboratory scale: Diffusion operator splitting and consistency, Ø. Pettersen (3) 229 – 252

Viscous flow

A new finite element formulation for computational fluid dynamics: VII. The Stokes problem with various well-posed boundary conditions: Symmetric formulations that converge for all velocity/pressure spaces, T.J.R. Hughes and L.P. Franca (1) 85 – 96
